

LOGAN

The Kansas Fish and Game Commission acquired the 271-acre Logan Wildlife Area. It is located nine miles south and two miles east of Winona in Logan County.

A 25 acre intermittent lake that goes dry during low rainfall is present on the area.

Trees such as cottonwood, elm,

and willow can be found along the lake shoreline and the associated drainage into the lake. The majority of the area is rangeland with a mixture of short grass and mid grass prairie. Buffalo grass, little bluestem, side oats grama, western wheat grass, and Indian grass are some of the native grasses found on the area. Soapweed can be

found interspersed throughout the rangeland.

The area is periodically grazed for short terms to enhance and stimulate the grass communities. Food plots of milo and sunflowers are planted on the area to provide food and cover for wildlife.

WILDLIFE INFORMATION

A diversity of both game and non-game wildlife can be seen at the Logan Wildlife Area. Due to its size, wildlife is easily driven off the area by light hunting pressure, so hunting opportunities are limited.

The area supports a fair population of ringneck pheasants. Upland bird hunters can be successful hunting the food plots during cold or inclement weather. Mule and whitetail deer, dove, rabbits (jack and cotton-tail), and coyotes in low numbers are also found on the area.

During the fall and spring, redheads, mallards, teal, wood ducks, Canada geese, gadwalls, and other migratory waterfowl use the lake as a resting area. Waterfowl hunting is very inconsistent and varies with

weather and water levels.

Great blue herons and black-crowned night herons can be observed along the shoreline of the lake. Other wildlife that frequent the area are badgers, hawks, owls, turkeys, magpies, shore birds, song birds, snakes, turtles, and rodents.

FISHING

Several Species of fish are stocked when the lake level is adequate to support a fishery. They include channel catfish, bluegill, redear sunfish, and wipers. Other species such as green sunfish, black crappie, and black bullheads may also be present. Growth of fish at Logan SFL is accelerated due to the cyclic refilling, which creates high nutrient levels. Quality is usually

good to excellent for the duration of the lake. Statewide length and creel limits are in effect for pertinent species when water is available.

THINGS TO REMEMBER

Vehicles are restricted to maintained roads.

No drinking water is available on the area.

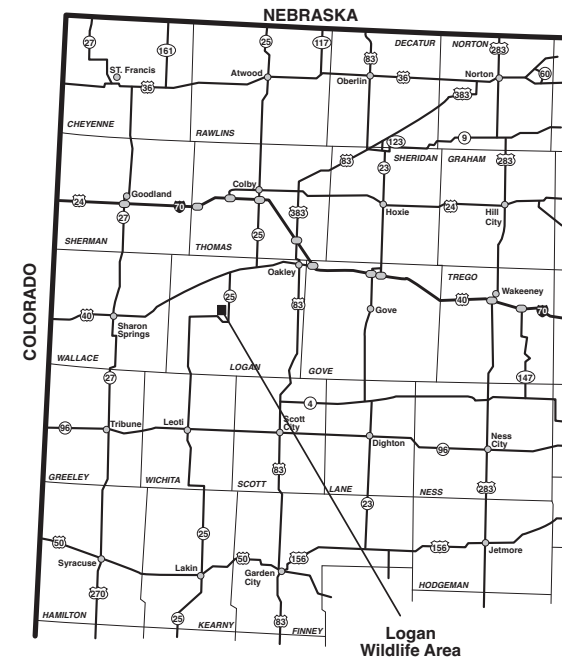

Camping is allowed on 3 designated areas.

Steel shot is required for waterfowl hunting.

Consult the information signs on the area for more complete rules and regulations that apply to Kansas Wildlife and Parks areas.

DO YOUR PART

Wildlife areas are a necessary and vital natural resource for maintaining successful wildlife populations and to provide a variety of outdoor recreational opportunities. Litter inhibits the recreation experience for others, so please take all trash with you when you leave.

General Area Map

The Kansas Department of Wildlife and Parks (KDWP) does not discriminate on the basis of race, ethnicity, color, religion, national origin, sex (gender), sexual orientation, age, disability, genetic information, or protected veteran's status, in employment, access to programs, or other KDWP benefits or services. If you believe you have been discriminated against in any employment, access to programs, or other KDWP benefit or service, please submit a complaint to: Kansas Department of Wildlife and Parks Office of the Secretary, 1020 S Kansas Ave. Topeka, KS 66612-1327 (785) 296-2281. 10/25
