## ***ABSTRACT***

*Random samples comprised of 14,199 Kansas resident and 7,252 non-resident 2009 hunting, combination, and lifetime license holders were selected through the electronic Kansas Outdoors Automated Licensing System (KOALS). Each individual was asked to complete an on-line questionnaire about their hunting activity in Kansas for the 2009–2010 seasons. Paper questionnaires were provided to 1,279 hunters who requested them. From the 20,566 deliverable postcards, 6,400 (31.1%) usable responses were obtained (3,782 residents, 2,618 non-residents) and 4,509 indicated hunting in Kansas during the 2009-2010 small game seasons (2,844 residents, 1,665 non-residents).*

*About 153,000 active licensed hunters harvested an estimated 861,000 doves, 485,000 quail, 746,000 pheasants, 5,400 greater prairie chickens, 910 lesser prairie chickens, 126,000 cottontails, 42,000 jackrabbits, and 100,000 squirrels.*

## **SMALL GAME HUNTER ACTIVITY SURVEY - 2009**

**Objective:** Estimate statewide hunter activity and harvest parameters for Kansas' major small game species.

**Procedure:** A random sample of 14,199 Kansas resident and 7,252 non-resident 2009 hunting, combination, and lifetime license holders was selected from all Kansas counties using the electronic Kansas Outdoors Automated Licensing System (KOALS). Each individual was notified by postcard in early February 2010 of their selection for the survey and asked to complete an on-line questionnaire of their hunting activity about the 2009-2010 seasons. Paper questionnaires were provided to hunters who requested them. After approximately 5 weeks, non-respondents were mailed a second postcard notification requesting their participation in this survey.

After relying entirely on electronic responses for the 2008 survey and discovering that older hunters had been undersampled with that all-electronic approach (see 2008 report), hunters sampled for the 2009 survey were immediately offered the option of receiving a paper questionnaire by returning a postage-paid card attached to their first notice. The same offer was made with the second notice. A total of 1,279 hunters requested paper questionnaires.

**Results:** From the 20,566 deliverable notifications, 6,400 usable responses were obtained for an overall response rate of 31.12%. These included 3,782 responses (3,175 electronic, 607 paper) from resident hunters, and 2,618 responses (2,193 electronic, 425 paper) from non-resident hunters. Of these, 4,509 indicated hunting small game during the 2009-2010 seasons (2,844 residents and 1,665 non-residents). Based on these values, 75.2% and 63.6% of resident and non-resident hunters, respectively, hunted small game in Kansas. Female hunters accounted for 5.9% of the resident and 2.5% of the non-resident responses.

Hunting license sales totaled 177,673 in 2009, an increase of 4.99% compared to 2008 sales of 169,226. Resident license sales increased 2.90% from 107,034 in 2008 to 110,141 in 2009. Non-resident license sales increased 8.59% from 62,192 in 2008 to 67,532 in 2009. Lifetime license holders (past 25 years, 1985–2009) numbered 36,409 during 2009.

Using the small game participation percentages previously noted (residents = 75.2%, non-residents = 63.6%), it was estimated that about 82,824 resident and 42,949 non-resident license buyers hunted small game in Kansas during the 2009-2010 seasons. The resident percentage was applied to lifetime license holders yielding an estimated 27,379 additional active hunters.

Long-term harvest estimates and hunter success indices are presented by species in tables 1 through 7. Tables 8 through 16 (a = all hunters, b = residents, c = non-residents) present regional harvest and hunter success indices for each species during the 2009-2010 seasons. Table 17 indicates the proportion of Kansas small game hunting that occurred on public land. Tables 18(a,b) and 19 present age and county-of-residence, respectively, for survey respondents. Relative small game hunting participation and harvest estimates by species are shown in tables 20a and 20b for residents and non-residents, respectively.

A summary of the 2009 small game hunting season regulations follows.

**2009**

**SMALL GAME HUNTING SEASONS, BAG LIMITS, AND POSSESSION LIMITS**

|  |   |
|--|---|
| <b>DOVE</b>                            | <i>September 1 through October 31<br/>and November 7 through 15<br/>Daily bag = 15, Possession = 30</i>   |

<sup>a</sup> Hunter estimates prior to 1962 were not adjusted for inactive license buyers.<sup>b</sup> Average Bag Per Day through 1967 expresses overall mean season bag divided by overall mean season days.

ABPD after 1967 is the mean of individual hunter ratios of season bag to season days.

<sup>c</sup> Percent of active hunters hunting species unobtainable due to 1979 questionnaire error. Value is 1974-1978 mean.<sup>d</sup> Electronic licensing permitted random sampling of non-residents for the 1st time, improving how estimates were calculated.

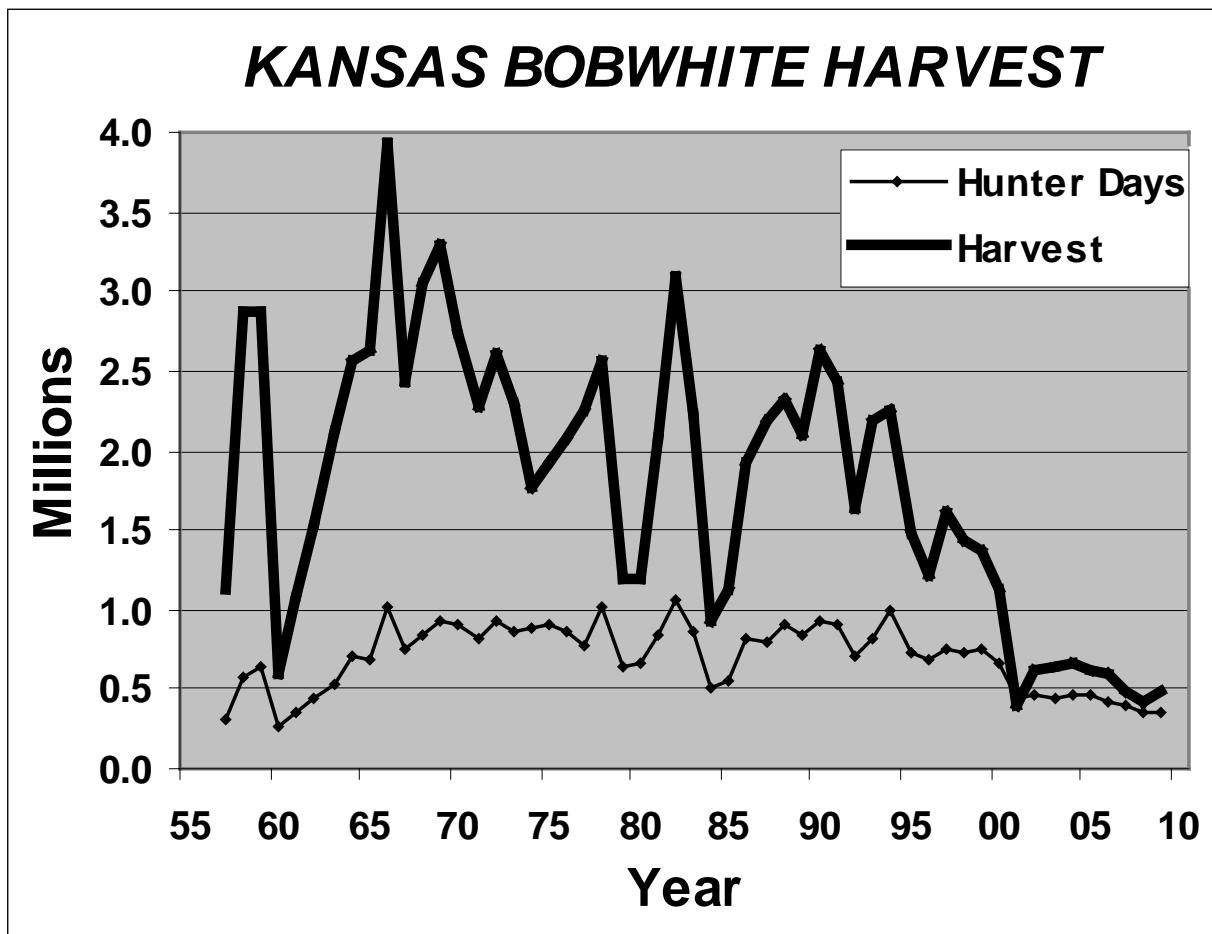

Table 2. Estimated annual BOBWHITE hunting activity in Kansas.

| Year              | Percent Hunting Species | Est. Total Hunters   | Est. Total Days | Est. Total Harvest | Season Days Per Hunter | Season Bag Per Hunter | Avg. Bag Per Day  |

<sup>a</sup> Hunter estimates prior to 1962 were not adjusted for inactive license buyers.<sup>b</sup> Average Bag Per Day through 1967 expresses overall mean season bag divided by overall mean season days.

ABPD after 1967 is the mean of individual hunter ratios of season bag to season days.

<sup>c</sup> Percent of active hunters hunting species unobtainable due to 1979 questionnaire error. Value is 1974-1978 mean.<sup>d</sup> Electronic licensing permitted random sampling of non-residents for the 1st time, improving how estimates were calculated.

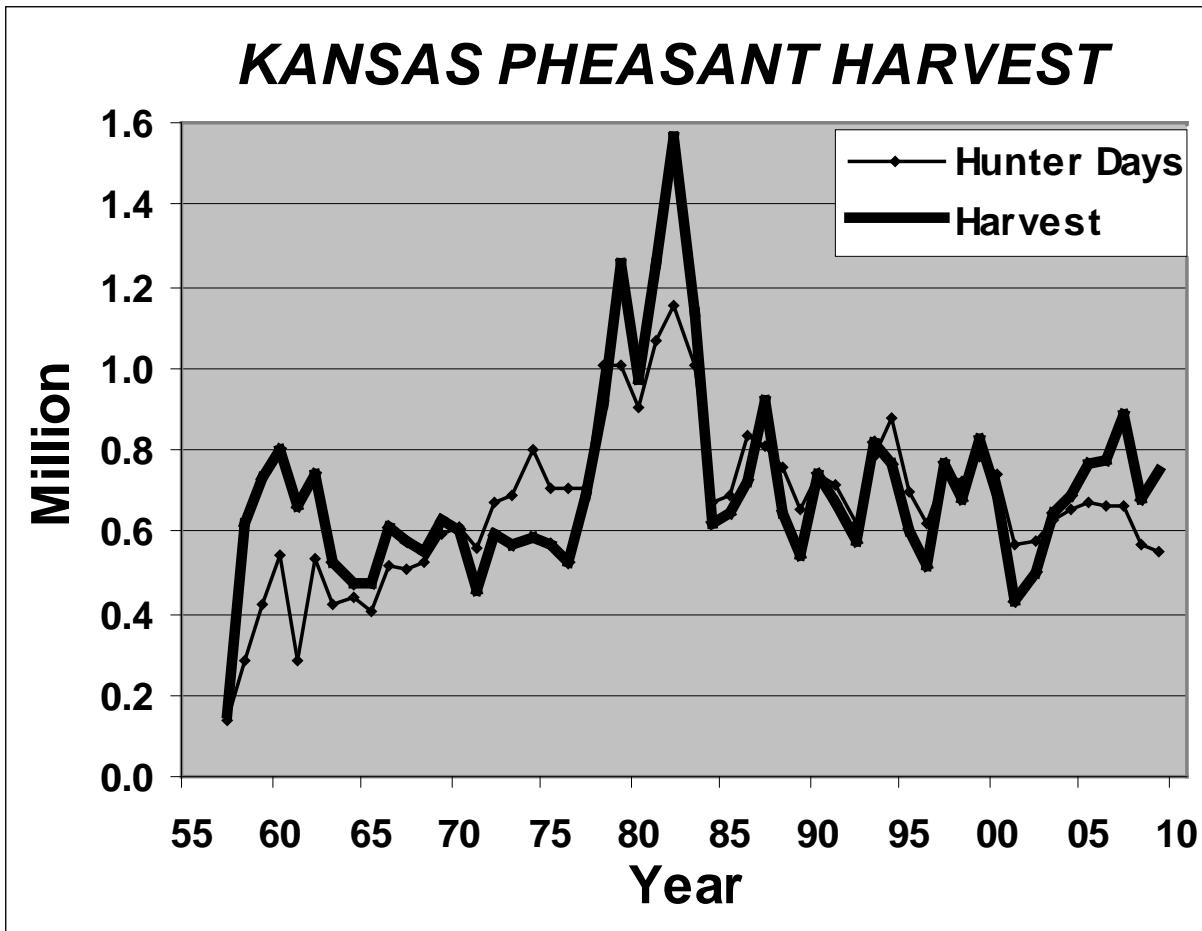

Table 3. Estimated annual PHEASANT hunting activity in Kansas.

| Year              | Percent Hunting Species | Est. Total Hunters   | Est. Total Days | Est. <sup>a</sup> Total Harvest | Season Days Per Hunter | Season <sup>a</sup> Bag Per Hunter | Average <sup>a</sup> Bag Per Day |

<sup>a</sup> Values are for cocks only. Hen harvest estimates are based on check station data showing 28.6% (264,000) hens in 1961 and 19.4% (178,000) hens in 1962.

<sup>b</sup> Hunter estimates prior to 1962 were not adjusted for inactive license buyers.

<sup>c</sup> Average Bag Per Day through 1967 expresses overall mean season bag divided by overall mean season days.

ABPD after 1967 is the mean of individual hunter ratios of season bag to season days.

<sup>d</sup> Percent of active hunters hunting species unobtainable due to 1979 questionnaire error. Value is 1974-1978 mean.

<sup>e</sup> Electronic licensing permitted random sampling of non-residents for the 1st time, improving how estimates were calculated.

## ***GREATER PRAIRIE CHICKEN***

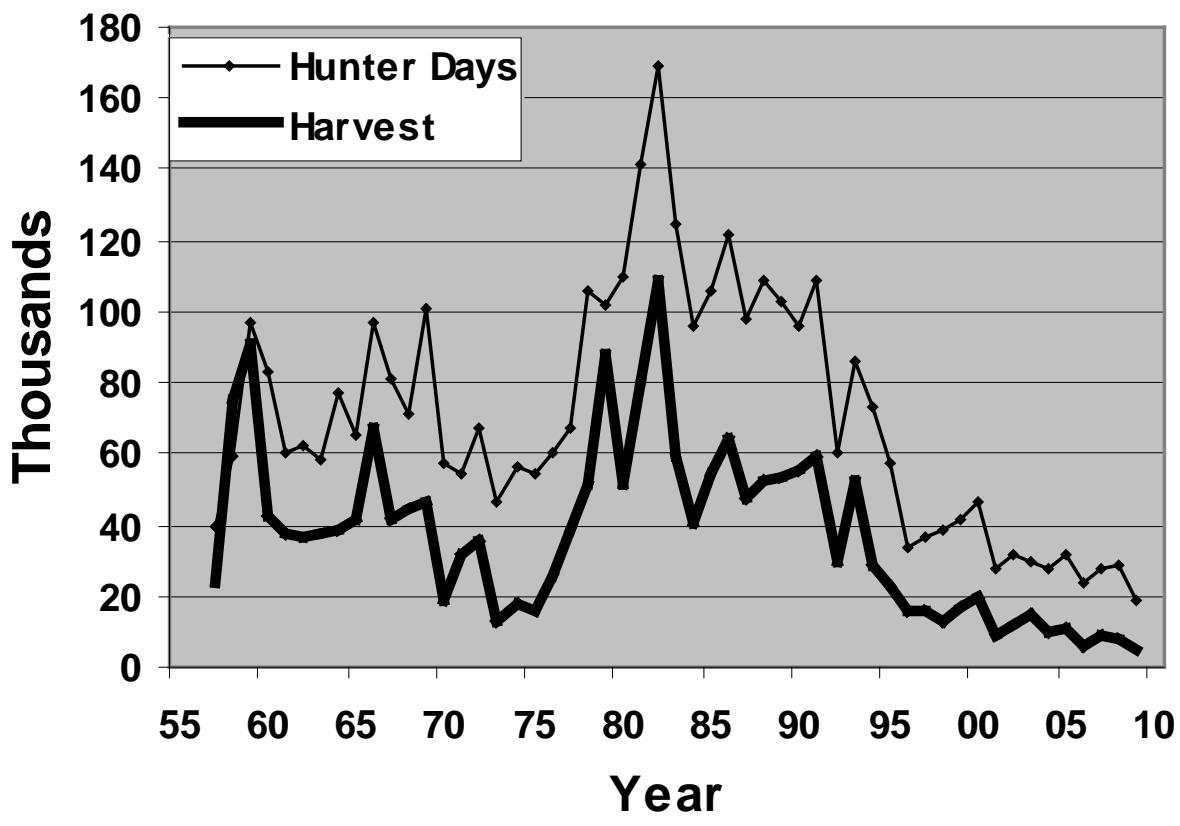

Table 4. Estimated annual GREATER PRAIRIE CHICKEN hunting activity in Kansas.

| Year              | Percent Hunting Species | Est. Total Hunters  | Est. Total Days | Est. Total Harvest | Season Days Per Hunter | Season Bag Per Hunter | Avg. Bag Per Day  |

<sup>a</sup> Hunter estimates prior to 1962 were not adjusted for inactive license buyers.<sup>b</sup> Average Bag Per Day through 1979 expresses overall mean season bag divided by overall mean season days.

ABPD after 1979 is the mean of individual hunter ratios of season bag to season days.

<sup>c</sup> Percent of active hunters hunting species unobtainable due to 1979 questionnaire error. Value is 1974-1978 mean.<sup>d</sup> Values from 1989 forward include both regular (November opening to Jan. 31) and special early (9/15-10/15) season.<sup>e</sup> Electronic licensing permitted random sampling of non-residents for the 1st time, improving how estimates were calculated.

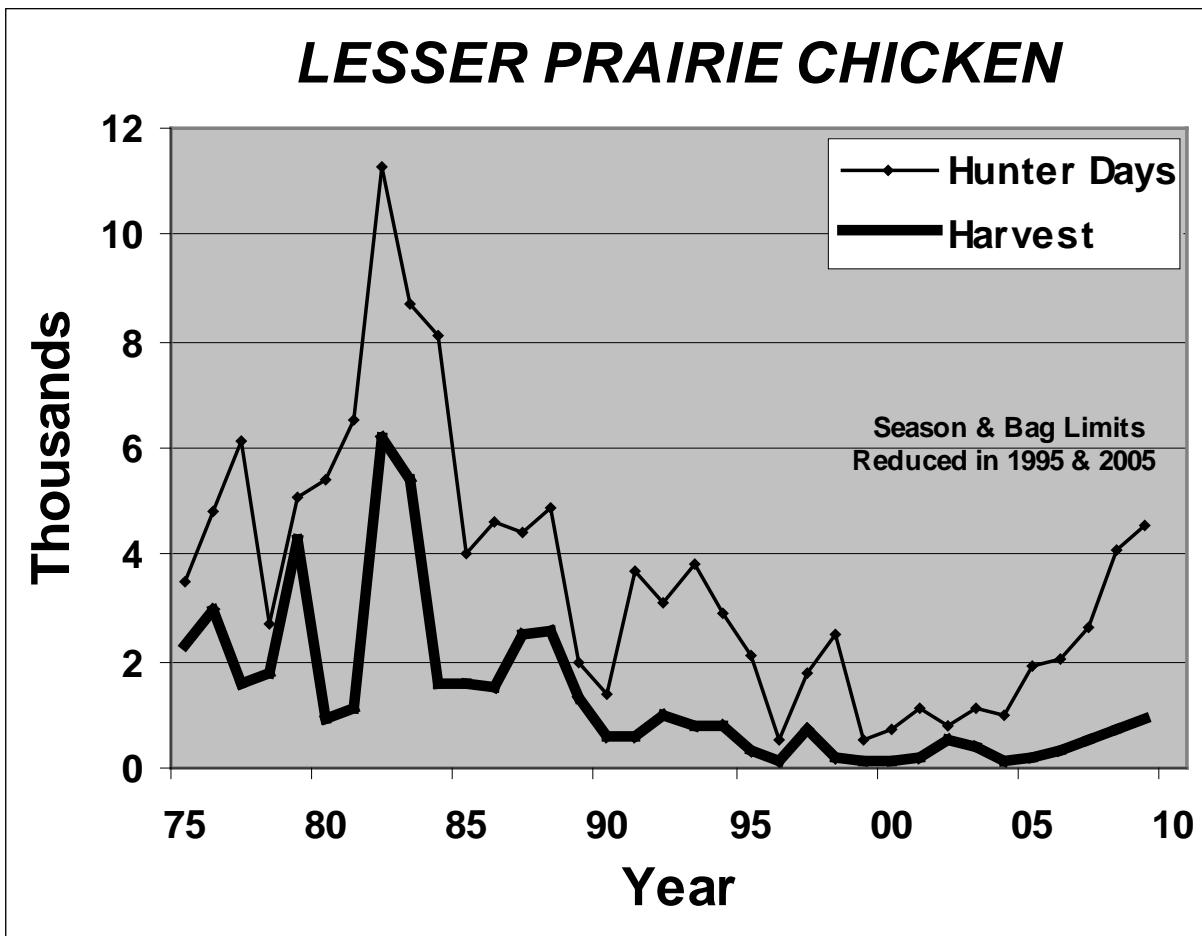

Table 5. Estimated annual LESSER PRAIRIE CHICKEN hunting activity in Kansas<sup>a</sup>.

| Year              | Percent Hunting Species | Est. Total Hunters | Est. Total Days | Est. Total Harvest | Season Days Per Hunter | Season Bag Per Hunter | Avg. Bag Per Day  |

<sup>a</sup> Wide annual variation is caused by low sample size for this species.

<sup>b</sup> Percent of active hunters hunting species unobtainable due to 1979 questionnaire error. Value is 1974-1978 mean.

<sup>c</sup> Average Bag Per Day through 1979 expresses overall mean season bag divided by overall mean season days.

ABPD after 1979 is the mean of individual hunter ratios of season bag to season days.

<sup>d</sup> Values from 1992-1994 include both regular (November opening to Jan. 31) and special early (9/15-10/15) season.

<sup>e</sup> Season length reduced and with daily bag set at 1.

<sup>f</sup> Electronic licensing permitted random sampling of non-residents for the 1st time, improving how estimates were calculated.

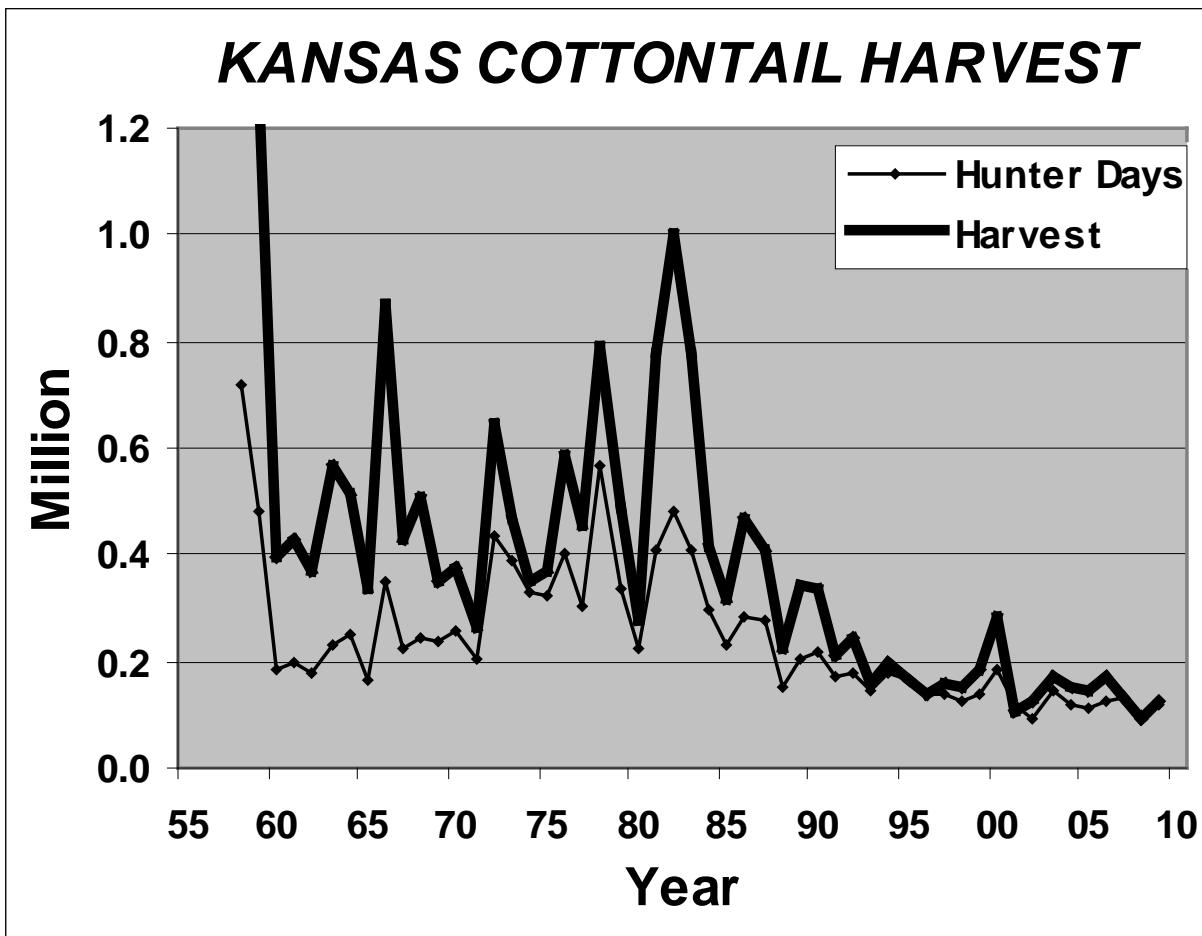

Table 6. Estimated annual COTTONTAIL hunting activity in Kansas.

| Year              | Percent Hunting Species | Est. Total Hunters  | Est. Total Days | Est. Total Harvest | Season Days Per Hunter | Season Bag Per Hunter | Avg. Bag Per Day  |

<sup>a</sup> Hunter estimates prior to 1962 were not adjusted for inactive license buyers.<sup>b</sup> Average Bag Per Day through 1967 expresses overall mean season bag divided by overall mean season days.

ABPD after 1967 is the mean of individual hunter ratios of season bag to season days.

<sup>c</sup> Percent of active hunters hunting species unobtainable due to 1979 questionnaire error. Value is 1974-1978 mean.<sup>d</sup> Electronic licensing permitted random sampling of non-residents for the 1st time, improving how estimates were calculated.

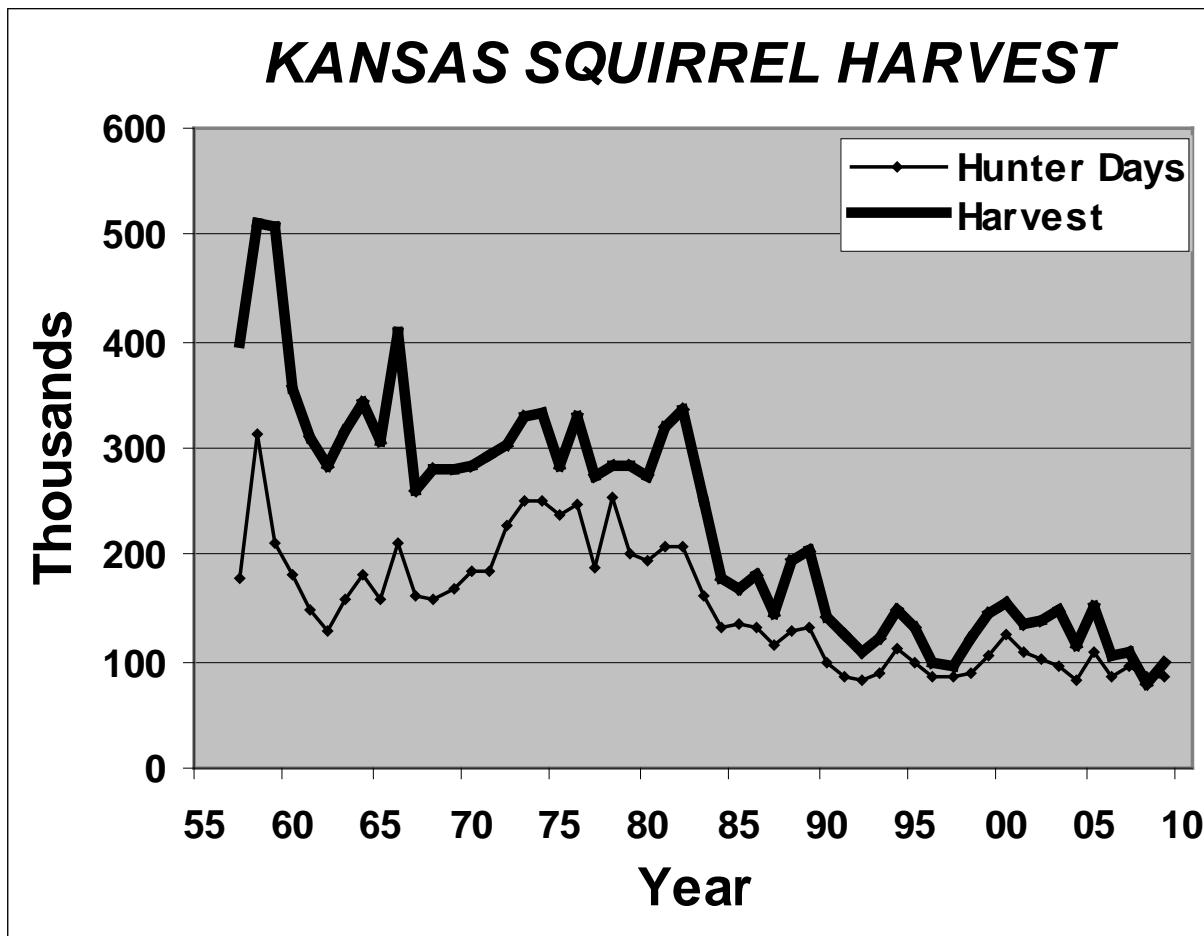

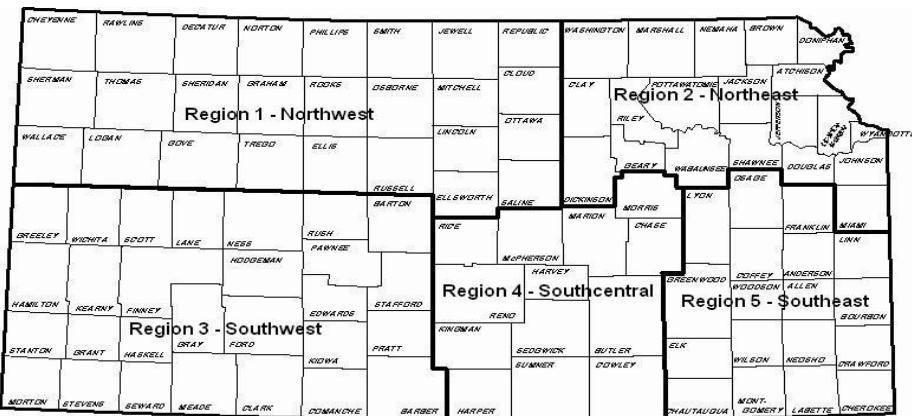

Table 7. Estimated annual SQUIRREL (Fox and Gray) hunting activity in Kansas.

| Year              | Percent Hunting Species | Est. Total Hunters  | Est. Total Days | Est. Total Harvest | Season Days Per Hunter | Season Bag Per Hunter | Avg. Bag Per Day  |

<sup>a</sup> Hunter estimates prior to 1962 were not adjusted for inactive license buyers.<sup>b</sup> Average Bag Per Day through 1967 expresses overall mean season bag divided by overall mean season days.

ABPD after 1967 is the mean of individual hunter ratios of season bag to season days.

<sup>c</sup> Percent of active hunters hunting species unobtainable due to 1979 questionnaire error. Value is 1974-1978 mean.<sup>d</sup> Season was extended 2 months to run from June 1 through the end of February.<sup>e</sup> Electronic licensing permitted random sampling of non-residents for the 1st time, improving how estimates were calculated.

<sup>a</sup> Hunters reporting some small game activity. Values from 1980-2005 are for Resident hunters only.

<sup>b</sup> From the 1995 start of the statewide Walk-In-Hunting Area (WIHA) program, the question indicated hunters should not include WIHA as public land. However, inclusion of WIHA does occur to an unknown degree.

<sup>c</sup> Electronic licensing permitted random sampling of Non-Residents for the 1st time. Values after 2005 are weighted means of both Resident and Non-Resident hunters.

| 40               | 79     | 2.15                   | 65               | 61     | 1.66                   |
| 41               | 69     | 1.88                   |                  |        |                        |

<sup>a</sup> Only 75.2% of the resident survey respondents actively hunted small game in the 2009-2010 seasons.

<sup>b</sup> Hunters under 16 or over 64 are not required to purchase hunting licenses, so are generally not sampled.

<sup>a</sup> Only 75.2% of the resident survey respondents actively hunted small game in the 2009-2010 seasons.

## **RELATIVE RESIDENT AND NON-RESIDENT SMALL GAME HUNTING INTERESTS**

**2009**

*Implementation of the Kansas Outdoor Licensing System (KOWLS) has made it possible to make direct comparisons of Kansas Resident (R) and Non-Resident (NR) hunting activity since a randomly-selected, same-year sample can now be obtained for NR hunters. Similar comparisons of residents and non-residents were made in the past using non-random samples from NR hunters and, generally, the new random-sampling method corroborates the hunting patterns of non-residents as previously estimated.*

*This survey, as those of previous years, indicates that ring-necked pheasants remain the species most pursued by both R and NR small-game hunters in Kansas, with a greater proportion (84%) of NR small game hunters pursuing pheasants than R small game hunters (69%). The presence of substantial pheasant populations also influences where NR hunters pursue other species such as bobwhite. About 67% of NR Bobwhite hunters hunt the species in the W (M1) and NC (M2) regions (combined) as compared to 51% for R bobwhite hunters. Pheasant population levels exert a disproportionate influence on the number of NR hunters who come to Kansas each fall. In the past, a one-year lag effect has been evident in that NR hunters have been more closely correlated with pheasant populations of the previous year rather than those of the current year. That is, improved hunting resultant from good pheasant production in one year produced an increase in NR hunters the following year, and the reverse. The growth and popularity of the WIHA program has played a significant role in increases in NR hunters and may have partially masked this lag effect in recent years.*

*Resident and NR small game hunters show similar preferences for hunting bobwhite, greater prairie-chickens, and jackrabbits. However, NR hunters exhibit much lower tendencies to hunt doves, cottontails, and squirrels than R small game hunters. Although hunting participation for lesser prairie chickens is quite low (1% or less) for both R and NR hunters, there appears to be greater interest on the part of NR hunters in pursuing this species. This may reflect the fact that Kansas is currently the only state where lesser prairie-chickens may be legally taken. Some of these NR hunters may also pursue this species as part of a North American grouse grand slam.*

*Hunting participation also reflects changes in small game populations over time. The clearest examples of this are the changes, both over time and regionally, in the numbers and proportions of small game hunters who have pursued bobwhite. The proportion of resident small game hunters who hunt bobwhite has typically diminished in years following population crashes and increased around population highs. Since the bobwhite crash that occurred in the winter of 2000–2001, not only have overall numbers of quail hunters declined, but the proportion of small-game hunters who pursued quail has also remained low. Regionally, the northeast (M5) and southeast (M6) quail management regions only accounted for 18% of Kansas' resident bobwhite hunters in 2009, compared to values of 40–42% in the early 1980's. These same eastern regions only account for 7% of the bobwhite hunting done by non-residents. Quail habitat deterioration and changes in societal interests probably account for these declines.*

Table 20a. Regional breakdown of **RESIDENT** hunting activity as indicated by sample sizes for the 2009-2010 season. State values in ( ) indicate percent of the 2,844 active **Resident** respondents. Regional values in ( ) indicate percent of the state total for the species.

| Region <sup>a</sup> | Sample Size by Species |            |            |                                    |                         |             |             |           |
